This chapter reviews the epidemiology of smoking-induced cardiovascular disease (CVD) and the mechanisms by which tobacco smoke is thought to cause CVD. The discussion includes use of biomarkers to diagnose smoking-induced CVD and treatment implications of the pathophysiology of the disease. The link between secondhand smoke and CVD has been reviewed in the 2006 report of the Surgeon General ...

Endothelins are peptides with receptors and effects in many body organs. Endothelin constricts blood vessels and raises blood pressure. The endothelins are normally kept in balance by other mechanisms, but when overexpressed, they contribute to high blood pressure (hypertension), heart disease, and potentially other diseases.. Endothelins are 21-amino acid vasoconstricting peptides produced ...
