Viruses And

Bacteria Guided

Viruses are another type of tiny microorganism, although they're even smaller than bacteria. Like bacteria, they're very diverse and have a variety of shapes and features. Viruses are parasitic.

Bacterial vs. Viral Infections: What's the Difference?

Viruses: Much like bacteria, viruses can

Read Online Viruses And Bacteria Guided

be found in almost any environment. They are pathogens that infect prokaryotic and eukaryotic organisms including animals, plants, bacteria, and archaeans. Viruses that infect extremophiles such as archaeans have genetic adaptations that enable them to survive harsh environmental conditions (hydrothermal vents, sulphuric waters, etc.).

Differences Between Bacteria and Viruses

Virus vs bacteria: Any difference in symptoms? Symptoms usually reflect the area of the body infected, and the infecting organism. For example, a bacterial infection of the skin may cause a discharge, swelling, pain and redness in a certain area, whereas a viral infection, such as hepatitis C may cause
